maximising wildlife returns by minimising threats...

**Conservancy status summary**

**Returns from natural resources in 2016**
- Combined tourism returns: N$ 0 (%)
- Combined hunting returns: N$ 0 (%)
- Veld product returns: N$ 0 (%)
- Other returns (e.g. interest): N$ 0 (%)

Two of the most significant returns for the conservancy:
- Cash income to the conservancy to cover running costs and invest in developments
- Employment to conservancy residents

**Cost of natural resource conflicts in 2016**
- Estimated human wildlife conflict cost: N$ 162,470
- Estimated poached high value species loss: N$ 0
- Total conflict cost estimate: N$ 162,470

**Natural resource cost–return ratio in 2016**
- Returns data not available at time of printing

**Management performance in 2016**

**Wildlife status summary in 2016**

**Key to the status barometer**

**Conservancies reduce environmental costs while increasing environmental returns.**
- Returns from wildlife can far outweigh human wildlife conflict costs.
Wildlife provides a wide range of benefits. Some wildlife can cause conflicts, but all wildlife is of value to tourism, trophy hunting and a healthy environment.

By using all the available information and adapting and improving activities, threats such as human wildlife conflict, poaching and other issues can be minimised.

Wildlife Status
Count trend – gives the species status in the conservancy based on game count trend data.
National guideline – gives the species status in the conservancy using national guidelines for the conservancy; for example, lions may cause local problems, but are of high value and are rare at landscape level.
Desired number – gives the species status in the conservancy based on what the conservancy would like to have.
dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Annual game count currently not done

Predator monitoring charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

Not all data or species are shown on this report; use your Event Book for more information.

Locally rare species are not found very often in the conservancy and need special conservation attention.
