maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2017
- the chart shows the main sources of returns and values and their percentage of the total returns
- Approximate Total Returns N$ 228

Cost of natural resource conflicts in 2017
- estimates are based on average national values
- Estimated human wildlife conflict cost N$ 147,700
- Estimated poached high value species loss N$ 0
- Total conflict cost estimate N$ 147,700

Natural resource cost–return ratio in 2017
- the chart shows the approximate ratio of returns to costs

Management performance in 2017
- the chart shows the number of incidents per category for the last 3 years
- the darkest bar (on the right) indicates the current year for each type

Wildlife status summary in 2017
- the chart shows the approximate ratio of returns to costs

Human wildlife conflict trend
- the chart shows the total number of incidents each year, subdivided by species, grouped as herbivores and predators

Human wildlife conflict

Poaching

Number of incidents per year
- Commercial poaching is a serious threat to conservancy benefits. The chart shows the number of incidents per category
- Most troublesome problem animals 2015-2017
- the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each type

Arrests and convictions
- number of incidents per category

Wildlife status
- the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

Wildlife status summary
- the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

Wildlife status
- the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

Key to the status barometer
- the chart shows the percentage of returns to costs

Potential value estimates (N$) for species are based on:
- Threats & benefits created
- Threats & benefits needed

Conservancies reduce environmental costs while increasing environmental returns. Returns from wildlife can far outweigh human wildlife conflict costs.
Wildlife provides a wide range of benefits. Some wildlife can cause conflicts, but all wildlife is of value to tourism, trophy hunting and a healthy environment.

By using all the available information and adapting and improving activities, threats such as human wildlife conflict, poaching and other issues can be minimised.
