EDITORIAL

Summer's definitely here with the arrival of migrants and the promise of rain, and that means that we're nearing the end of yet another year. This is the fourth and final edition of Lanioturdus for the year. As many of you are aware, Chris Hines is roaming the globe at the moment and has trustingly left me (Carole Roberts) in charge of getting this edition out. (Hm, I'm afraid the "Short Notes" are a little short this edition.) After having spent a month "down under" birding in Oz, Chris is now "up North" studying for a couple of months in the Netherlands. However, he hasn't forgotten us or Lanioturdus and submitted an article on his trip to Australia which mentions all sorts of winged wonders – frogmouths and friarbirds, parrots and pittas (to mention just a few). I have a feeling, though, that we might expect a much shorter article on his trip to the Netherlands!

There's no excuse for ignoring many of those LBJs in 1999! Peter Kaestner has put together a guide to the larks of Namibia for us. It will be published in two parts, the first of which is in this edition. He has tried to make it easy for us by highlighting the characteristics and range of each species found here, and has provided a field key as well. Peter stresses that the key should be regarded as incomplete because it needs to be put to the test (yes, that's our job), and that he would appreciate any comments to help improve it. So, birders, get out there and hit those larks!

I don't know about the rest of you, but I certainly didn't get out and about as much as I would have liked to this year. In this issue we have published a preliminary list of activities and outings for 1999 so we can all plan our trips early. If anyone has any ideas, requests or queries in this line, they should contact Dieter or Jeremy. See you out there!

That really just leaves me to extend heartfelt thanks to all those who've contributed to the journal over the past year – it can't happen without you – you've been great! Wishing you all a wonderful Christmas and a prosperous, bird-filled New Year!
FEEDING OBSERVATIONS ON RAPTORS IN ETOSHA

Bill Branch
Port Elizabeth Museum, PO Box 13147, Humewood 6013

On consecutive evenings (31 July – 1 August, 1998) at the waterhole at the Okaukuejo camp in the Etosha National Park, a grey, smallish raptor was observed to take large bats feeding on moths attracted to the waterhole lights. On the first evening three bats were taken in 20 minutes, and on the next evening another two bats were taken in 15 minutes. On the first occasion the raptor was not seen perching, and it could not be confirmed that all bats were taken by the same bird. On the second evening the bird was seen perching at long distance (80–100 m), and observed to take both bats. On all occasions the bird attacked from a low position, flying about 20 m above the ground. From distance, in poor light at dusk, the bird was grey backed, and during a low pass over the water-hole view site was seen to have a barred undertail and finely barred chest and underwings. It was not a lanner, hobby or Bat Hawk (unfortunately), and looked most like an Ovambo Sparrowhawk (Accipiter ovampensis).

On the 2 August 1998 at 07h00, approximately 6 km east of Okaukuejo on the road to Namutoni, an immature (brown phase) and an adult Pale Chanting Goshawk (Melierax canorus) were observed sitting on low (<1 metre high) shrubs beside the road. Beneath them, digging at the base of the bushes was a pair of adult Honey Badgers (Mellivora capensis). During a ten-minute period of observation the goshawks twice followed the Honey Badgers, sitting in bushes above or adjacent to the foraging badgers. Although no prey was seen captured by either the badgers or goshawks, it was obvious that the latter were opportunistically waiting to pounce on any prey disturbed by the badgers. A similar association between Honey Badgers and Pale Chanting Goshawk has been recorded from the Kalahari Gemsbok National Park (Brown 1970).
